**workflow model analysis based on colored petri nets**

**May 1st, 2020 - proof let  $pn$  be a free choice wf net the  $pn$  is also free choice therefore the problem of deciding whether  $pn$  is live and bounded can be solved in polynomial time  $\gamma$  by theorem 1 this corresponds to soundness definition 8 a petri net  $pn$  is well formed if and only if there is a state  $m_0$  such that  $pn$   $m_0$  is live and bounded"simultaneous petri net synthesis facultatea de informatic?**

May 29th, 2020 - the focus will be on choice free nets that is nets without structural choices and we explore how previously published efficient algorithms for the pre synthesis and proper synthesis of bounded and choice free petri nets can be generalised for the simultaneous pre synthesis and synthesis of such multi marked nets"**pdf improved analyzing algorithms of free choice net for**

**May 8th, 2020 - definition 3 free choice net a free choice net is an ordinary petri net such that every arc from a place is either a unique outgoing arc or a unique incoming arc to a transition'**

May 28th, 2020 - petri nets proved useful to describe various real world systems but many of their properties are very hard to check to alleviate this difficulty subclasses are often considered the class of weighted marked graphs with relaxed place constraint wmg for short in which each place has at most one input and one output and the larger class of choice free cf nets in which each place has "**core**
