May 15th, 2020 - unimodular lattices are equal to their dual lattices and for this reason unimodular lattices are also known as self dual given a pair  $m, n$  of nonnegative integers an even unimodular lattice of signature  $m, n$  exists if and only if  $m, n$  is divisible by 8 but an odd unimodular lattice of signature  $m, n$  always exists 'kneser neighbours and orthogonal galois representations in
