*June 1st, 2020 - this chapter reviews the typical features
of the atmospheric plasma mainly with respect to surface
processing to give a realistic picture about this emerging
technology plasma processing represents a very broad
spectrum of methods and devices utilizing electrical
discharges in selected gases or vapours for interactions
with solids liquids or gases'*

'etching microfabrication

June 5th, 2020 - etching is used in microfabrication to chemically remove layers from the surface of a wafer during manufacturing etching is a critically important process module and every wafer undergoes many etching steps before it is plete for many etch steps part of the wafer is protected from the etchant by a masking material which resists etching'
