May 4th, 2020 - a methodology for visualizing analytic and synthetic geometry in n dimensions is presented it is based on a system of parallel coordinates which induces a non projective mapping between n dimensional and 2 dimensional sets hypersurfaces are represented by their planar images which have some geometrical properties analogous to the properties of the hypersurface that they represent'

May 5th, 2020 - parallel coordinates is a common way of visualizing high dimensional geometry and analyzing multivariate data to show a set of points in an n dimensional space a backdrop is drawn consisting of n parallel lines typically vertical and equally
