### ***Math brackets in python Stack Overflow***

*May 1st, 2020 - You don t need math brackets just use nested parentheses Humans use in writing out plex math expressions to make them more readable to other humans but this isn t necessary They don t mean anything different than regular parentheses So when writing code just stick to the parentheses'* **Python**

### **Programming Tutorials**

April 21st, 2020 - Doing Math with Neural Networks  
Unconventional Neural Networks in Python and Tensorflow p 10

**'Book Review Doing Math with Python insideBIGDATA**

*April 27th, 2020 - When one of my favorite independent tech book publishers No Starch Press notified me about their new title ?Doing Math with Python ? I was energized to review what potentially could be a good new resource for budding data scientists I wasn't disappointed The book contains all the important first ingredients that a newbie data scientist needs to get started in the field'*

**Coding Explained**

**May 1st, 2020 - Python supports all of the math operations that you would expect The basic ones are addition subtraction multiplication and division Other ones include the exponentiation and modulo operators which you will see in a moment Addition amp Subtraction Let?s start out simple and add two numbers together store the result in a variable and' **'Best Programming Languages for Math WhoIsHostingThis****

**April 29th, 2020 - When it es to solving math problems programming languages aren t always used by the average**

gotten the hang of things'

**'python Math operations from string Stack Overflow**

May 1st, 2020 - Let's say I have a standard Python string such as one obtained from raw input maybe `2 2` for simplicity's sake I'd like to convert this string to standard math operations in Python such that `2 2` would return `4`. Is there an easy way to do this or would I have to split on the spaces and parse each number symbol manually then do?'

**Doing Math in Python**

April 15th, 2020 - Doing Math in Python Numeric Data Types There are two ways numbers are represented internally integers and floating point numbers. Even though the numbers `1` and `1.0` have the same value their internal representation are very different. Computations with integers are exact whereas those that involve floating point numbers are not.'
