Homological Algebra This course  
note introduces the reader to the  
language of categories and to  
present the basic notions of  
homological algebra first from an  
elementary point of view with the  
notion of derived functors next  
with a more sophisticated approach  
with the introduction of  
triangulated and derived  
categories'*

HOMOLOGICAL ALGEBRA ANDREW BAKER 1  
Chain plexes and their homology Let  
 $R$  be a ring and  $\text{Mod}R$  the category  
of right  $R$  modules a very similar  
discussion can be had for the  
category of left  $R$  modules  $R\text{Mod}$   
also makes sense and is left to the  
reader Then a sequence of  $R$  module  
homomorphisms  $L \xrightarrow{f} M \xrightarrow{g} N$  is said  
to be exact if  $\text{Ker}g = \text{Im}f$  Of course  
this implies that  $gf = 0$ ' ***Homological

February 11th, 2020 - The property  
of distributivity allows one to  
work with induced morphisms in an  
automatically consistent way as we  
prove in a *Coherence Theorem for  
homological algebra?* On the  
contrary a *non distributive?*  
homological structure like the  
bifiltered chain plex can easily  
lead to inconsistency if one  
explores the interaction of its two  
spectral sequences farther than it  
is'

May 1st, 2020 - Basic Homological  
Algebra by Scott Osbourne is a nice  
beginners text It is very thorough  
and detailed yet well motivated and  
conversational with a particularly  
engaging style Although old  
fashioned and outdated in many  
respects I would have to say that  
Cartan Eilenberg is still of great  
value as a reference'
