*July 9th, 2018 - Your Keeloq Code Hopping transmitters will change their signal every time the button is pressed so when a thief grabs then re transmits your signal the alarm New Mid Range PIC16C74 OTP Microcontrollers from Microchip"***Car door unlocking Arduino Forum**
June 30th, 2018 - I m looking for info on how the rolling code encryption is preformed preferably some source code and how to hook up a resonator I ve looked at a couple of tutorials on using a resonator and they appear to have contradicting information'

'Modular Mid Range PICmicro KEELOQ Decoder in C

June 25th, 2018 - The code presented in this application note is com posed of the following basic modules RXI C interrupt driven receiver source ? Using the Timer1 and CCP module in capture mode ? Using comparator inputs interrupt All of these techniques pose different constraints on the pin out or the PICmicro MCU that can be used This would lead to different performances in terms of achievable'

'A 32 hacking tool can open your garage door and unlock

June 20th, 2018 - With rolling codes the signal is unique every time rendering a code grabber device useless source Lake In addition the code is stored inside the car not within the keyfob A thief would need to break into the car to access the code which defeats the purpose of getting it in the first place'
