June 5th, 2020 - micropython documentation release 1 9 1 3 1 4powering by an external power source the pyboard can be powered by a battery or other external power source be sure to connect the positive lead of the power supply to vin and ground to gnd there is no polarity

protection on the pyboard so you must be careful when connecting anything to vin'

'micropython basics what is micropython

June 3rd, 2020 - micropython is a tiny open source python programming language interpreter that runs on small embedded development boards with micropython you can write clean and simple python code to control hardware instead of having to use plex low level languages like c or c what arduino uses for programming'

'micropython python for microcontrollers

June 4th, 2020 - micropython micropython is a lean and efficient implementation of the python 3 programming language that includes a small subset of the python standard library and is optimised to run on microcontrollers and in constrained environments'

'micropython python for programming microcontrollers

May 31st, 2020 - micropython has therefore been designed and designed specifically for programming on microcontrollers by adapting the standard python libraries in fact once a program is written in python micropython piles the code in a pact enough to be able to occupy a space limit of 256kb and run on devices with 16kb of ram'**programming debugging the pyboard using st link v2**

April 13th, 2020 - this is needed because the programming pins on the pyboard are shared with leds so if the micropython firmware it running it conflicts with the st link v2 programming in the following diagram p1 dfu is labelled boot0'
