**'references uptodate**

**May 22nd, 2020 - introduction correct interpretation of pulmonary function tests pfts requires the use of appropriate reference values to which the patient s results are pared unlike many physiologic parameters for which normal values do not vary with the characteristics of the particular patient predicted values of pulmonary function depend upon age height sex and race ethnicity'**

**'uptodate**

*May 20th, 2020 - introduction spirometry is used to measure forced expiratory flow rates and volumes it is the most monly used pulmonary function test and is useful in the evaluation of patients with respiratory symptoms eg dyspnea cough wheeze or risk factors for respiratory disease eg smoking occupational exposures family history'*
