May 21st, 2020 - presents a treatment of basic topics that arise in fourier analysis this title illustrates the role played by the structure of euclidean spaces particularly the action of translations dilatations and rotations and motivates the study of harmonic analysis on more general spaces having an analogous structure for example symmetric spaces **"radial function**

**June 1st, 2020 - in mathematics a radial function is a function defined on a euclidean space  $\mathbb{R}^n$  whose value at each point depends only on the distance between that point and the origin for example a radial function  $f$  in two dimensions has the form where  $r$  is a function of a single non negative real variable radial functions are contrasted with spherical functions and any decent function  $e^{-r}$ "**introduction to fourier analysis on euclidean spaces pms
