**May 28th, 2020 - in vision and art
harvard neurobiologist margaret
livingstone demonstrates that how we
see art depends ultimately on the cells
in our eyes and our brains she begins
by offering a prehensive account of
the biology of vision drawing on the
history of science and her own cutting
edge discoveries"customer reviews
vision and art the biology**

**March 29th, 2020 - vision is very
plex as we know but it is often**

made even more so by art and the tricks that can be played on the observer artists have discovered probably by intuition and often capitalized on what it is that we think we see rather than what we are really seeing'
