Introduction to Random Walks It
will be useful to consider random
walks on large graphs to study
actions on other objects Eg 1 We
will model card shuffling as a
random walk on the n
permutations of n objects'*

April 26th, 2020 - An ant starts

a random walk on the real number line at 0. At each step the ant moves by 1 or -1 with equal probability. After 6 moves the probability that the ant is on a positive number can be expressed as $\frac{a}{b}$ where a and b are positive coprime integers.

April 24th, 2020 - 3 the random variable X_n has the following distribution $1 - q$ p where as usual $q = 1 - p$ If $p = 1/2$ the random walk is called symmetric The adjective simple es from the fact that the size of each step is fixed equal to 1 and it is only the direction that is random One can study more general random walks where each step es'

Consider an undirected graph

G A random walk of length l

starting at the vertex u is a

sequence of vertices $u v_0 v_1$

$v_2 \dots v_l$ where each v_i is

chosen to be a random

neighbor of v_{i-1} for all $i > 0$

One considers the distribution

of v_i for i "
