Win32 API is a set  
of functions  
defined in the  
Windows OS in other  
words it is the  
Windows API this is  
the name given by  
Microsoft to the  
core set of  
application

- The Windows API  
Win32 is focused  
mainly on the  
programming  
language C in that  
its exposed  
functions and data  
structures are  
described in that  
language in recent  
versions of its  
documentation'

April 16th, 2016 -  
The first problem  
encountered by  
people trying to  
use the NeHe  
tutorials is that  
the GLAUX library  
has been deprecated  
and no longer  
exists either in  
Visual Studio or as  
a DLL for Windows  
The reasoning for  
that is the  
functions are  
easily replaced by  
using standard  
Win32 API calls and  
in this article  
series we will use  
that process'

October 3rd, 2018 -  
To learn Win32 API  
I suggest you start  
here then refer to  
theForger for  
further details  
then when you have  
a good general  
sense of how to do  
things go to the  
Reliable Software  
tutorial and  
Catch22 tutorials  
The former provides  
for example general  
purpose classes and  
methods for API and  
the second takes  
you through many  
useful methods'

Visual Basic does

an excellent job of

letting developers

build sophisticated

Windows

applications in a

relatively short

amount of time This

allows one to

quickly build
