June 5th, 2020 - a linear operator between banach spaces is continuous if and only if it is bounded that is the image of every bounded set in is bounded in or equivalently if there is a finite number called the operator norm a similar assertion is also true for arbitrary normed spaces the continuous linear operators from into form a subspace of which is a banach space with respect to'

'non linear operators springerlink

April 29th, 2020 - abstract linear operators are the simplest operators in many
problems one has to consider more plicated nonlinear operators as in the case of
linear operators again the main problem is to solve equations $ax = y$ for a nonlinear
 a in a hilbert or banach space geometrically this problem means that a certain
map or operator b leaves fixed at least one vector x i e $x = bx$ where bx'
